DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26, drawn to apparatus, classified in class 604, subclass 523.
- Claims 27-32, drawn to method of making, classified in class 604, subclass 898, 20.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case in Group II the applicant has not mentioned the apparatus in Group I, the apparatus in Group I may be process in any other matter and is not restricted to the process thought in Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant must also elect one of the following species:

This application contains claims directed to the following patentably distinct species of the claimed invention:

Speices A- an alternative embodiments, the union Between the manifold assembly 16 and ancillary medical devices (not shown) is completed using alternative connectors

Application/Control Number: 10/050,476

Art Unit: 3763

Speices B- in one embodiment, the outer tubular member segments 30,31,32 surrounding the inner tubular member 33 have an outer diameter ranging from about 0.040 inches to about 0.045 inches, with a wall thickness ranging from about 0.0028 inches to about 0.0044 inches.

Speices C- In alternative embodiments, the inner tubular member 32 can be made of a lubricious material such as polytetrafluoroethylene (PTFE) or other suitable polymer.

Speices D- figure 1

Speices E- figure 2

Speices F- In certain embodiments, the hypotube originates from the catheter's manifold assembly 16.

Speices G- In alternative embodiments, the proximal end of the hypotube originates distally from the catheter manifold assembly 16.

Speices H- figure 3

Speices I- In an alternative embodiment, the functionalized coupling agents include a second functional group comprising (meth)acrylate monomers.

Speices J- In yet another embodiment, the functionalized coupling agents include a second functional group comprising amine monomers.

Speices K- In some embodiments, lap joints formed with these coupling agents can exceed the strength and durability requirements necessary for intravascular medical devices.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no pending claim is considered generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

Application/Control Number: 10/050,476

Art Unit: 3763

readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roz Maiorino whose telephone number is 703-305-2336. The examiner can normally be reached on 9am-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on 703-308-2698. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 3763

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
